

Pizza Booking App

Delicious Pizza Delivered To You

An interactive platform to order your
favorite pizza.

App Overview

- Allows users to browse and select pizzas.
- Book orders through a simple and responsive form.
- Displays order history dynamically.
- Built with HTML, Bootstrap, and JavaScript.

Navigation Bar

- Includes links to Menu, Book Now, and My Orders.
- Uses Bootstrap classes for responsiveness.
- Features a brand logo with pizza slice icon.
- Collapsible menu for mobile devices.

Hero Section

- Bold, centered heading to attract users.
- Encouraging tagline to prompt booking.
- Styled with Bootstrap's text utilities.
- Bright background to align with pizza theme.

Menu Section

- Displays 6 types of pizzas with details.
- Each pizza card includes image, name, price, and description.
- Add to Cart button on each card.
- Responsive grid layout using Bootstrap's grid system.

Booking Form

- Includes fields for name, email, phone, pizza selection, quantity, and address.
- Dropdown menu for pizza selection with price.
- Validation using 'required' attributes.
- Styled with Bootstrap forms and card layout.

My Orders Section

- Displays a list of submitted orders.
- Shows name, phone, email, pizza, quantity, and total price.
- Each order is dynamically added on form submission.
- Placeholder message shown when no orders exist.

JavaScript Functionality

- Handles form submission with event listener.
- Validates form fields before processing.
- Creates order items and appends to the order list.
- Clears form after successful submission.

Styling & Layout

- Bootstrap 5 for responsive design.
- Font Awesome for icons (e.g., pizza, cart, check).
- Consistent use of red color theme.
- Card-based UI for clarity and appeal.

Summary

- User-friendly interface for browsing and booking pizzas.
- Effective layout for desktop and mobile views.
- Engaging visual design and intuitive navigation.
- Ready for enhancements like cart system or backend integration.
